

We need to find the total sales, Average sales and best selling product in the transaction

Input :

3 no. of transactions → 

name of product	one unit cost	total quantity
"Apple", 10.0, 10	String	double type
"Orange", 2.5, 10		int
"Apple", 5.0, 20		

where first one is string, second one is unit cost and third one is quantity of the product

$$\text{Avg. Sale} = \frac{\text{Total sale}}{\text{total quantity}}$$

①

↳ 

String	double	int
--------	--------	-----

②

↳ STL → pair

③

↳ create a class of Pair

→ vector<pair<string, pair<double, int>>> (✓)

↳

NT 7. first

V[i].first

U

U

U[i].second.first  
V[i].second.second;

3

To find the maximum selling product  
we use map D-S

map < string , int > mp  
          name           quantity
